

Reaper Save Compressor by stigs

Simple and effective tool to archive and optionally encrypt your project directories for transit.

Quick Start Guide

Installation

1. **Run the Installer:** Double-click the installer and follow the on-screen instructions.

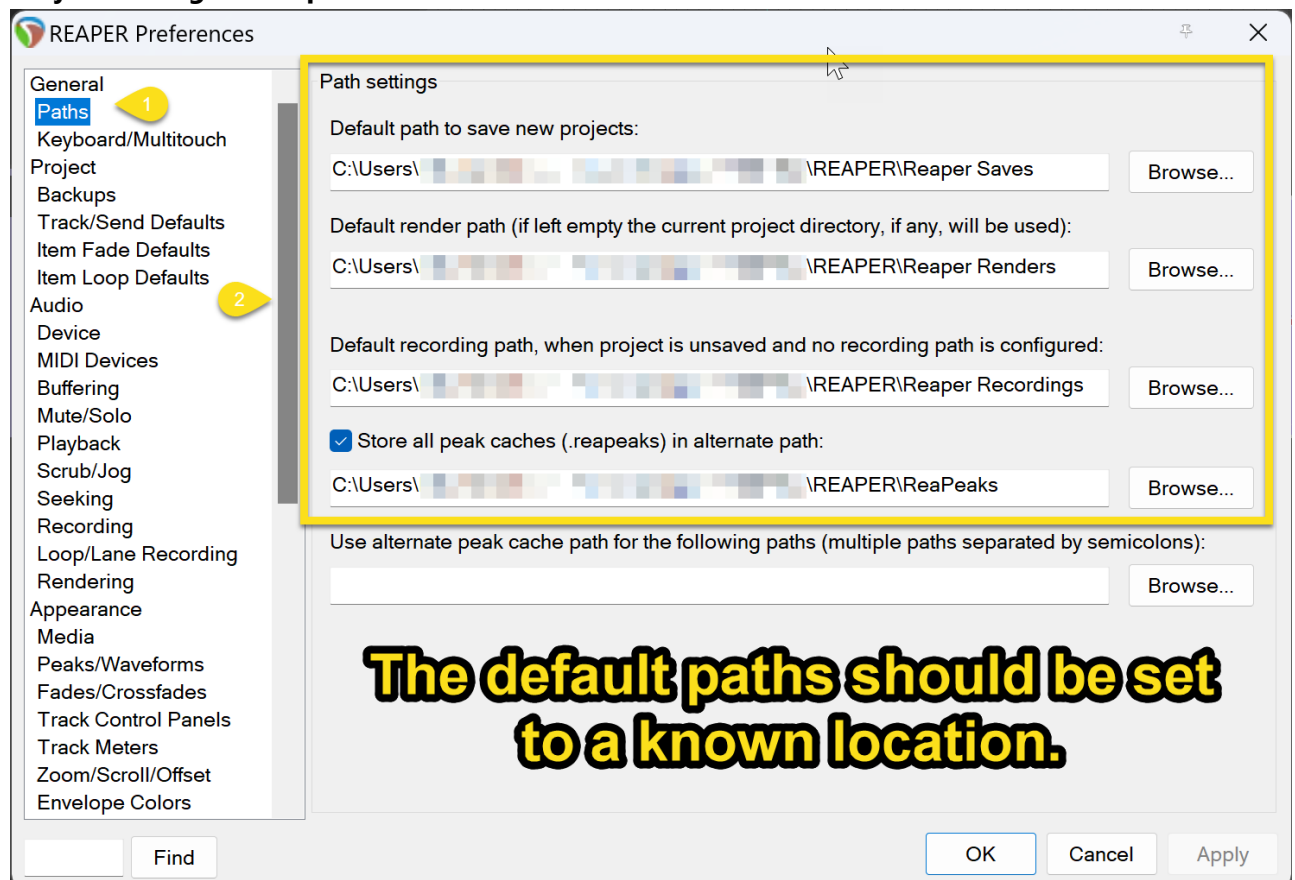

Using Reaper Save Compressor

1. **Open Reaper Save Compressor:** Use the shortcut created on your desktop or in the start menu.
2. **Choose a Directory:** Select the directory you wish to archive.
3. **Encryption (Optional):** Choose whether to encrypt the archive. If yes, enter a secure password.
4. **Archiving:** The tool will archive and optionally encrypt your directory. A confirmation message will display the sizes of the original and compressed folders.

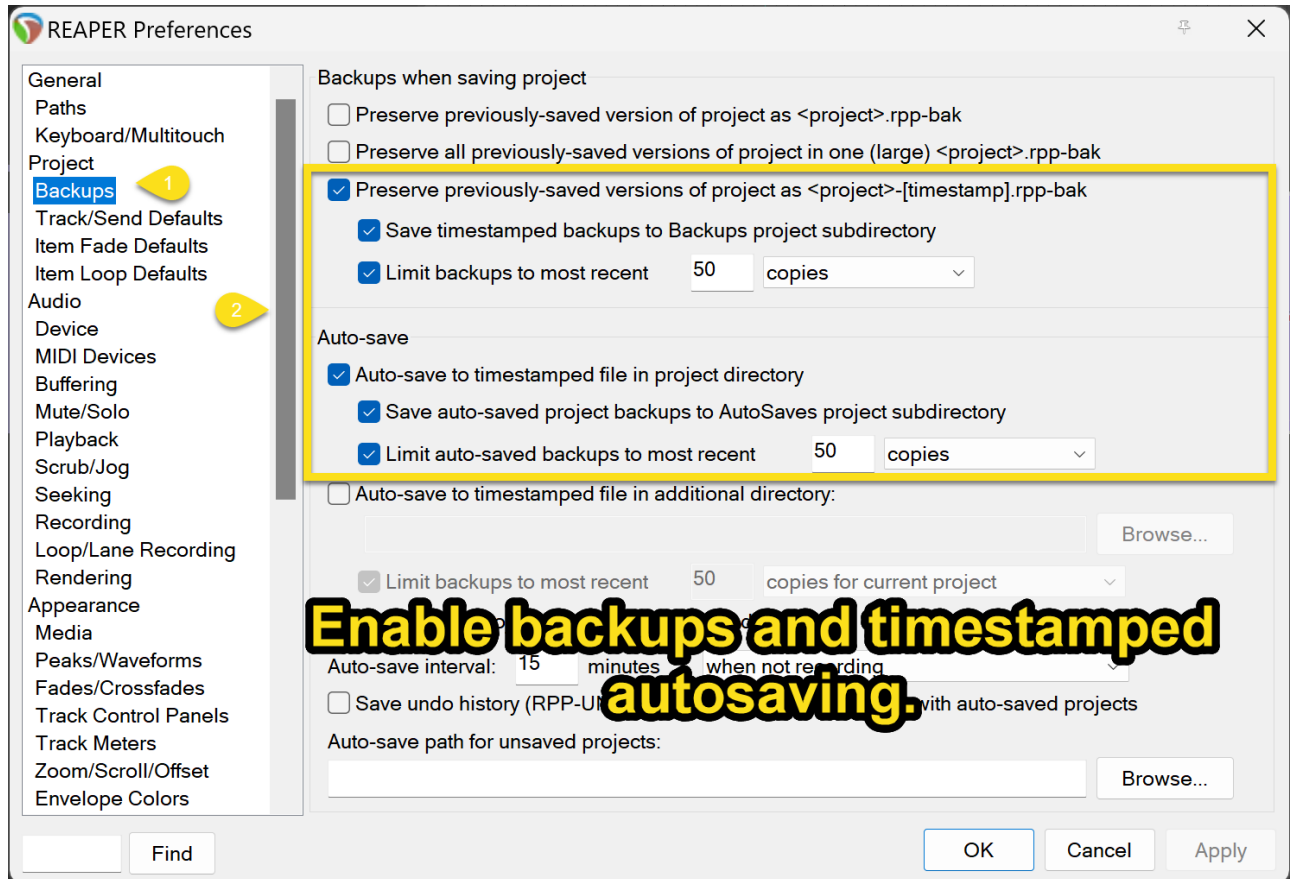

Setting Up Reaper for Project Directories

To ensure Reaper saves files in a specific directory for easy archiving:

1. **Project Settings in Reaper:**

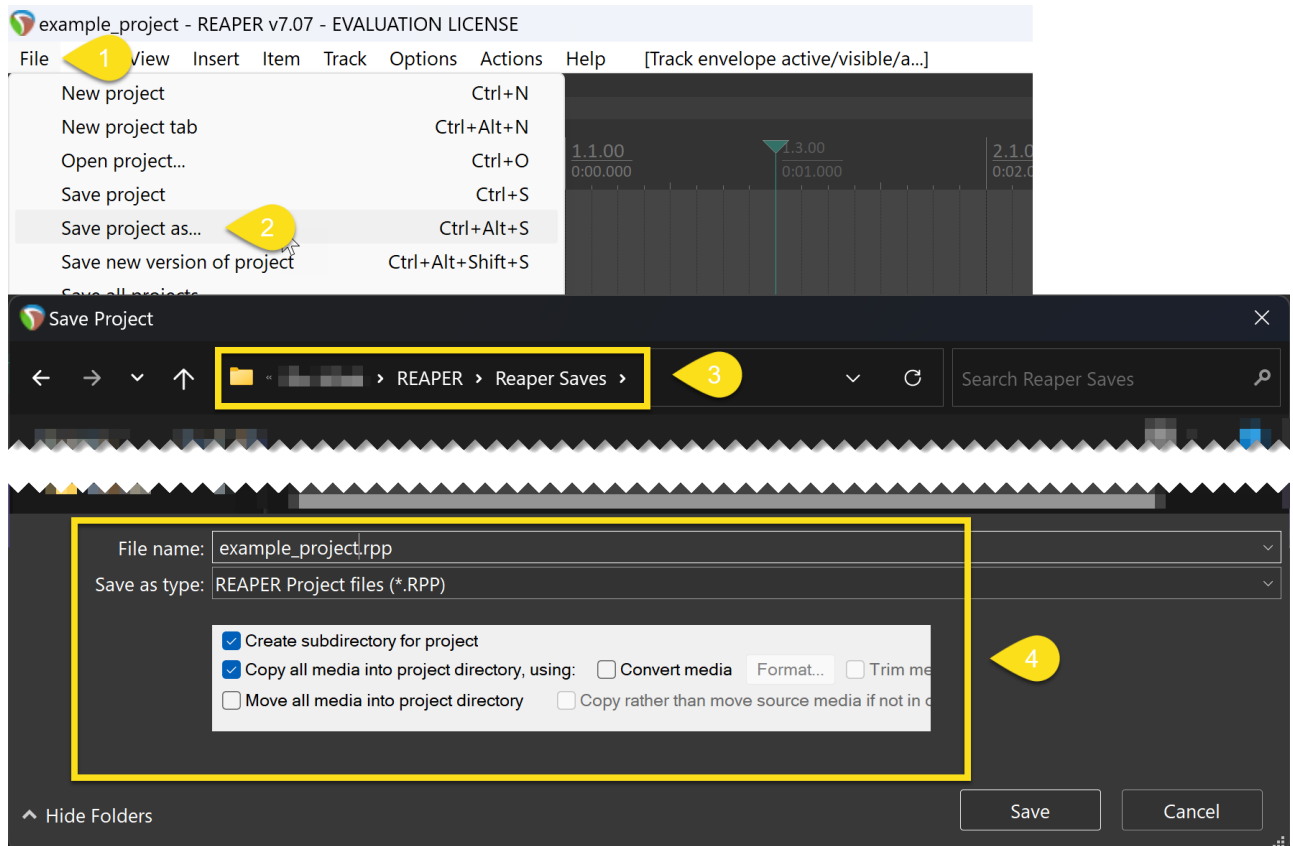

↑ First, It is recommended that you set default paths for each different type of item. Create a root folder somewhere (named "REAPER" in the image), and create and set the subfolders show above.

↑ Next, It is recommended that you set backups up as shown above.

2. Set Media Files Directory:

Finally, select "File" > "Save project as...", then save your project in the Reaper Saves folder from earlier with the shown settings.
